

I. Listing of Claims

Please amend the claims as follows:

CLAIMS

1. (Currently Amended) An air-bag arrangement comprising an air-bag, and a gas generator to generate a gas to inflate the air-bag, the gas generator being connected to a support so as to be moveable between a closed position in which part of the gas generator extends across an aperture communicating with the interior of the air bag to close the aperture, and an open position in which the aperture is opened to reduce the pressure of the gas within the air-bag, the gas generator initially being retained in the closed position by a retainer, the retainer being actuatable, in response to a signal, to enable ~~move~~ the gas generator to ~~move~~ to the open position.

2. (Original) An air-bag arrangement according to Claim 1 wherein the retainer is actuated by a pyrotechnic charge.

Claims 3-8 (Withdrawn)

9. (Previously Presented) An arrangement according to Claim 1 wherein the retainer comprises an expandable element which engages part of a flange carried by the gas generator, the expandable element, on expansion thereof, serving to move the gas generator to the open position.

10. (Previously Presented) An arrangement according to Claim 9, wherein the expandable element is plastically deformable.

11. (Previously Presented) An arrangement according to Claim 10, wherein the expandable element comprises a bellows arrangement provided with a pyrotechnic device.

12. (Previously Presented) An air-bag arrangement according to Claim 1 wherein the gas generator moves between the open and closed position through movement about a hinge.

13. (Previously Presented) An arrangement according to Claim 1 wherein the gas generator is urged to move to the open position by the pressure of the gas from the gas generator inflating the air-bag.

14. (Previously Presented) An arrangement according to Claim 1 wherein the gas generator is urged to move to the open position by the retainer.
